

PACKAGING FACTORY MILK

WHERE DIE CUT LIDS ARE USED?

Die cut lids are widely used for heat sealing plastic packages containing dairy, jam, honey, halva, confectionary, crème, chocolate and tomato paste, margarine, baby food products, and dry goods.

ABOUT MILK PACKAGING FACTORY

Established in 2002, the Packaging Factory MILK is the leading packaging producer in Russia. We are now ready to introduce our products worldwide.

Our die cut lids have all the most popular kinds of embossing: needle, flax, worm. But we never stop to innovate and are happy to introduce our newest product – unembossed die cut lids.

An unembossed die cut lid is the trend line in dairy packing! It gives prominence to your product and it looks like a new glossy magazine among old newspapers!

80% OF EUROPEAN PRODUCERS USE UNEMBOSSSED DIE CUT LIDS

Our product line has die cut lids of more than 20 sizes. Do you need a custom size? We can make an individual lid for your package and provide testing samples for your production.

THE IMAGE LOOKS EXACTLY AS DESIGNED!

Thanks to its vibrant colors and sharp image, an unembossed die cut lid looks luxurious and provokes for impulse purchase.

The Packaging Factory MILK is Russia's number one aluminum foil package producer. The company was founded in 2002. We have clients in Canada, Western Europe, and Africa, featuring 300 companies in total. We gained the trust of such picky companies as Danone, Ehrmann, Valio, and Pepsico.

Our production center was created and launched with the help of professional European engineers. We produce up to 200 tons of output each month. Our modern coating line, where we lacquer and prepare our foil for printing, was developed by a Swiss company POLYTYPE – the world leader in producing such equipment. Printing is carried out on American Mark Andy presses. We constantly improve not only our production technology but also our corporate management. As a result, our company has been accredited by the largest food and pharmaceutical companies.
